EDUCATION

Miami University | Oxford, OH

Master of Computer Science (GPA: 4.0)

Graduation December 2026

Bachelor of Science - Computer Science

Graduated May 2026

Honors/Awards: President's List, Dean's List, Redhawk Excellence Scholarship, Miami University Club Swim Team

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, C#, SQL, JavaScript, Bash

AI/ML: scikit-learn, Pandas, NumPy, Jupyter, OpenAI API

Technologies: Docker, Ansible, Flask, REST APIs, CI/CD, Git, NGINX, AWS (EC2)

Certification: Red Hat Certified System Administrator (RHCSA)

Earned Jul 2025

RELEVANT EXPERIENCE

Technical Solutions Architect Intern | World Wide Technology | St. Louis, MO

May 2024 - Present

- Developed a Python-based API automation tool and implemented CI/CD pipelines for automated testing and packaging.
- Designed Ansible playbooks, roles, and inventories for streamlined provisioning and configuration management.
- Selected for the Internship Committee, a small group of eight interns collaborating with HR to enhance the program; led ~30 interns, organized events, gathered feedback, and presented recommendations to leadership.
- Delivered technical presentations, including a Vector Databases deep dive for GS&A and a capstone to executives.
- Built Docker-based development environments for consistent, cross-platform deployment.
- Authored detailed Markdown documentation following a "documentation as code" methodology.

Teacher's Assistant | Miami University Computer Science Dept | Oxford, OH

Aug 2023 - Dec 2023

- Nominated by the College of Engineering and Computing faculty to serve as a Teacher's Assistant for incoming Computer Science students.
- Collaborated with professors to review course curriculum and evaluate student coursework.
- Held weekly office hours to provide technical guidance and clarify core computer science curriculum concepts.

PROJECTS

Multi-Cloud Infrastructure & REST API | Advanced Networking

Spring 2026

- Deployed a multi-cloud infrastructure across 4 OpenStack VMs and an AWS EC2 instance to host a weather-aware trip planning REST API.
- Built a Flask REST API on two load-balanced Docker containers, backed by MariaDB and a microservice that consumed live weather data from Open-Meteo.
- Secured all cloud-to-cloud traffic through an encrypted WireGuard VPN tunnel; configured NGINX load balancing, HTTPS, DNS, and iptables firewall/NAT.

Sensor-Based Human Activity Recognition | Machine Learning

Spring 2026

- Processed ~3M raw sensor readings from 12 users across 11 activities, engineering statistical features via a sliding-window approach.
- Trained and evaluated 10 ML models including XGBoost, Random Forest, SVM, and ANN, achieving 86% classification accuracy with XGBoost.
- Validated results with K-Fold and Stratified K-Fold cross-validation to confirm model stability.
